WORK EXPERIENCE

Data Integration Engineer, *MW Components* - Chicago, IL **December 2025 - June 2026**

- Engineered time-series forecasting pipelines using ARIMA and Random Forest models, identifying 200 anomalies in manufacturing data, improving predictive accuracy by 30%.
- Built SQL data models and ELT integrations in Amazon Redshift connecting ERP, PIM (Akeneo), CMS, and CRM (HubSpot) systems, streamlining reports and eliminating past-due orders by 80%.
- Refactored website architecture and integrated Typesense for optimized search indexing, accelerating page load speeds and content retrieval by 30%.

Software Engineer, *Valor Esports - Remote* **December 2023 - December 2025**

- Integrated REST APIs to process 1000+ gameplay hours using Python on robust backend pipelines, leveraging Pandas to produce classification models on athletes' playstyles.
- Designed 16+ metrics using data science frameworks (scikit-learn, XGBoost) for insights on player capabilities, improving performances by 40% over three months.
- Created and led high-performance programs and interactive workshops, driving global client acquisition, with over 100 clients internationally.

Aerospace Engineer Intern, *Trimas Aerospace - CA* **June 2023 - August 2023**

- Developed an Ollama-based LLM using LangChain with retrieval-augmented generation (RAG) to optimize search and summarization across 150+ technical documents and engineering standards.
- Utilized SolidWorks for component modeling on blind fasteners adhering to FAA and AS9100 standards.
- Conducted detailed failure analysis using non-destructive testing methods to evaluate fatigue, stress, corrosion, and grain structure abnormalities in band-annealed steel parts.

EDUCATION

Aerospace Engineering (B.S.), *University of Illinois Urbana-Champaign*

- Designed and implemented autonomous collision avoidance systems for drones in C.
- Manufactured and tested carbon fiber paneling created with prepreg lamination techniques.
- Processed, analyzed and managed big data for weather patterns via Pandas and Dask.

SKILLS & LANGUAGES

Programming: Python, C, C++, Rust, TypeScript, SQL, Git, Docker, AWS, CI/CD, Redshift

Mechanical Design & Testing: SolidWorks, CATIA, AutoCAD, MATLAB, GD&T, FEA, NDT

Languages: English, Portuguese, Spanish, French

Soft Skills: Communication, Analytical Problem Solving, Cross-Functional Teamwork
